### TECHNICAL CHARACTERISTICS SIZES 56 -132

Motive motors are built according to international standard regulations; each size throughout the construction forms is calculated with reference to the tables of standard IEC 72-1.

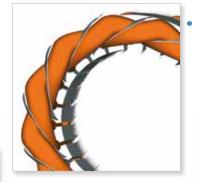

Motive asynchronous three-phase delphi series motors are closed, and externally ventilated. The frame, up to 132 included, is made in die casting aluminium alloy, from size 160 up to 355 the frame is made in cast iron.

All DELPHI motors are three-phase, multiple voltage multi-frequency 50/60Hz, F class insulation, (H on request) S1 continuous duty service, IP55 protection (IP56, 66 and 67 on request) IE2, IE3 or IE4 efficiency class tropicalized winding suitable for inverter power supply

IE2, high efficiency class IEC 60034-30-1 IE3, premium efficiency class IEC 60034-30-1 IE4, super premium efficiency class IEC 60034-30-1

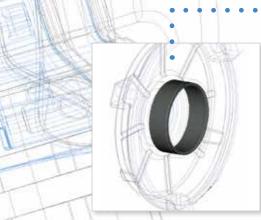

**Download from** www.motive.it the catalogue of 1PH motors "MONO" series

The copper is impregnated with a double layer of H class insulating enamel to ensure high resistance to electrical, thermal and mechanical stress. The phases are further isolated

by another layer of Nomex film to protect the motors from the voltage peaks that usually occur when the motor is controlled by an inverter.

Bearings selected for their silence and reliability and, for the same objectives, the cage rotor is dynamically balanced.

From type 90, a steel insert is provided in the bearing slot of the aluminum flanges, to resist to radial mechanical forces with a fair degree of security

Aiming the maximum protection, the motors are equipped with important details like the pull-resistant cable gland and the combination of bearings with two shields each with rubber seal rings

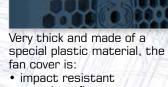

Cable gland can be easily moved on both the sides of the connection box, thanks to the screw cap

To protect them by the rust, motive motors are painted in silver RAL9006 colour

- soundproofing
- scratchproof
- rustproof

From size 56 to size 132, feet are detachable, and can be fixed on 3 sides of the housing, thus permittig the terminal box to be positioned up, right or left.

### TECHNICAL CHARACTERISTICS SIZES 160-355

Motive three phase motors from size 160 up to size 355 are made in castiron and have all those main features of the Delphi series, among which:

- standardized dimensions according to International standards (IFC 72-1)
- multiple voltage and multi-frequency 50/60Hz,
- F class insulation, [oupon request H or H+ (delfire)]
- S1 continuous duty service.
- IP55 protection (IP56, 66 and 67 on request)
- tropicalized winding and reinforced insulation

• suitable for inverter power supply\* [from 110kW and up we recommend to order the motor with insulated barings (option)]

provided with 3 PTC thermistors that protect the motor and the system by operation anomalies

equipped by lifting evebolts [one for B3 version (feet fixing), two for B5 version (flange fixing)]

### IE2, high efficiency class IEC 60034-30-1

IE3, premium efficiency class IEC 60034-30-1

IE4. super premium efficiency class IEC 60034-30-1

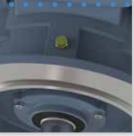

Keeping the same sealing system of the whole delphi series, the terminal box up to size 280 is made in aluminum, thus guaranteeing its IP65 protection index without being affected by the usual finishing imperfections of the cast iron

The terminal box can be rotated of 360° with steps of  $90^{\circ}$ 

From size 160 up to 280, we mount ZZ auto-lubricated bearings, thus avoiding the need of a periodical re-greasing maintenance

Instead, from size 315 and up, they are provided with lubricators. 4, 6 and 8 poles motors drive end bearings are in fact of open roller type, in order to withstand eventual extraordinary radial loads (see paragraph "components list")

Upon request, motive can anyway mount the terminal box laterally, on the right or the left

### DELFIRE SERIES, 100°C RESISTANT MOTORS

"DELFIRE" is an innovative range of three phase motors specifically designed to work in an ambient temperature of 100°C, like for instance the one of the ventilation of furnaces and dryers, in S1 continuous duty

The used technology finds its origin in EN 12101-3 fire emergency motors for smoke evacuation, but instead of being intended for working for few hours only, it is designed to offer an S1 continuous duty service and the same lifespam of a normal motor in a normal ambient. The main features are:

 metal cable glands and ventilation, viton gaskets and seals, high temp bearings, steel bearing seats

- defluxed winding for a low temp rise, dual coated magnet wires, increased H class:
- Double impregnation: varnished twice and re-baked. The process assures the coverage
  of pin holes. The increased solid content layer increases the high voltage capacity of the
  motor and better protects it against surge voltages. The increased parasitic capacitance
  gives a higher impulse withstand capacity;
- Gel Coat: the stator is then further protected by an epoxy compound which cures fast under hot conditions. Epoxy has very good fungus resistance properties, thus avoiding tracking failure, drastically reducing the service life of the motor. Epoxy also exhibits very good resistance to alkali as well as acids. Epoxy coating also allows for condensing humidity. The smoothly finished surface does not allow liquid water to stay on the windings

Available from size IEC 71 (0,25kW) up to zize 200 (30kW), in 2-4-6 poles.

For the performance and dimensional data of delfire series, do not refer to the standard motors data contained in this catalogue. If needed, ask it to our commercial office.

### **FFFICIFNCY**

In order to create a common system for the classification of induction motor efficiencies, IEC (International Electrotechnical Commission) issued the norm IEC 60034 "Rotating electrical machines"

- Part 30-1: Efficiency classes of single- speed, three-phase, cage-induction motors (IE-code)"-.
- Part 2-1: Standard methods for determining losses and efficiency from tests-.

In Europe it was a step ahead in the application of the Eco-design Directive for Energy- related Products [ErP] 2009/125/EC. It's based on such a normative picture and on the Ecodesign Regulation (EU) nr 640/2009, replaced in Oct 2019 by the Regulation (EU) 2019/1781, that:

- From June 2011, the efficiency of 2, 4, and 6 poles motors from 0.75kW up to 375kW lower than IE2 has been forbidden
- From 2015, the minimum efficiency for motors not equipped with an electronic variable speed drive from 7.5 to 375kW became IE3
- From 2017, the obligation of IE3 was extended to the motors not equipped with an electronic variable speed drive from 0,75kW to 5,5kW

We recommend to choose Motive VFD NEO or NANO

### -From 1 July 2021:

the energy efficiency of three-phase motors  $\geq 0.75 \text{ kW}$  and  $\leq 1.000 \text{ kW}$ , with 2, 4, 6 or 8 poles, rated for direct on-line operation [DOL], including ATEX (only exception Ex e) and brake motors, shall correspond to at least the IE3 efficiency level; the energy efficiency of three-phase motors with a rated output  $\geq 0.12 \text{ kW}$  and < 0.75 kW, with 2, 4, 6 or 8 poles, including ATEX and brake motors, shall correspond to at least the IE2 efficiency level;

### -From 1 July 2023:

the energy efficiency of ATEX Ex eb with power  $\geq$ 0,12 kW and  $\leq$ 1 000 kW, with 2, 4, 6 or 8 poles, and single-phase motors with power  $\geq$ 0,12 kW shall correspond to at least the IE2 efficiency; the energy efficiency of three-phase motors which are not brake motors or ATEX motors, with power  $\geq$ 75 kW and  $\leq$ 200 kW, with 2, 4, or 6 poles, shall correspond to at least the IE4 efficiency

### What did Motive do in this scenario?

- The measuring and calculation system of Motive motors efficiency is conform to the norm 60034-2-1. That's the one behind the data declared in the probative test-reports uploaded in motive web-site feach declared data, we remind it. is in fact supported. detailed and proven by by such test reports that anyone can download from:

### https://www.motive.it/en/rapporti.php

- From June 2011, IE1 motors are not by RINA (Certificate No. 2015/ produced anymore.
- IE3 "premium efficiency" motors are submitted to ISO:9001 TUV also available, and IE4 "Super Premium certification controls. Efficiency" motors will be available before 2023
- all 3PH motors below 0.75kW are min motors efficiency has also IE2 "high efficiency"
- IE2 motors with power higher than the Chinese market 0.75kW are still available, but their use in Europe is forbidden in case of direct on line operation
- The testing system, test reports, and data truth of Motive motors has been certified by IMQ, the main Italian certification body for electrical appliances. The same, in fact, has firstly inspected and qualified our internal testing laboratory according to the norm IEC/ISO 17025, and then supervised the internal efficiency tests on a sampling list of motors. Motive testing laboratory and procedures has also been certified

MI/O1/53), and it is

In 2020 Motive 3PH been certified by CQC for

### Clients benefits are of many kinds:

### BILL FFFFCTS

The purchase cost of a motor is about 2-3% of the total costs of its life. The balance is energy consumption costs. Comparing IE3 motors to IE2, the purchase price difference is recovered in about one year of energy saving. Of course, such period length depends by the specific motor, the use of it and the local energy costs of each Country.

### DURABILITY FFFFCTS

Higher efficiency motors heat less, slowing down the aging cycle of the insulating materials and living longer.

The average life is approximately from 35 to 40,000 hours for IE2 motors up to 15kW and 60,000 for IE2 bigger motors. IE3 motors can live approx 40% longer than IE2 motors.

### AMBIENT FEFECTS

Electric motors use 65% of all electricity in industry. Higher efficiency motors have the further objective of sustainable development, reduction of CO<sub>2</sub> emissions and consequent improvement of the quality of the atmosphere with an objective of sustainable development, Reduction of CO<sub>2</sub> emissions and consequent improvement of the quality of the atmosphere.

 Download our "Motive Energy Utility" App to calculate with your smartphone or tablet the energy saving bill effects by using a higher efficieny motor when replacing an old one.

### How to make a more efficient motor?

High efficiency can be seen in many ways: like the relation between output power and input absorbed power, or like a measure of the losses that born when converting the electric power in mechanical energy.

From another perspective, high efficiency motors consume less energy to produce the same torque on the shaft.

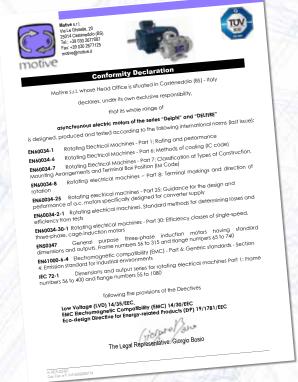

Basically, an high efficiency motor is the result of precise machining, lower frictions, a dynamically balanced rotor, smaller space between rotor and stator and of the use of better materials. The main factors for the design are based on the choice of the type of lamination sheets and windings. Motive motors are made with "FeV" magnetic lamination sheets, rather than the customary iron lamination sheets.

Composition and thickness give to magnetic lamination sheets a very low W/Kg loosing

Lower specific losses mean less magnetising current for the same Power and torque (thus less heating).

### **CE MARKING**

( F marking is referred to:

Low Voltage 14/35/EC

EMC Electromagnetic Compatibility 14/34/EC

Eco-design Directive for Energy-related Products (ErP) 09/125/EC

Note: The Machinery Directive (MD) 2006/42/EC excludes from its scope the electric motors (Art.1, comma 2)

CE marking is put by Motive as a visible sign of the product compliance with the requirements of above mentioned directives. In order to reach this conformity, Motive motors respect the following standards:

EN 60034-1 - EN 60034-5 - EN 60034-6 - EN60034-7 EN60034-8 - EN60034-2-1 - EN60034-30-1 - EN50347 -EN61000-6-4 - EN 60034-9 - EN 60034-25

**DELPHI EX SERIES** 

ATEX is the conventional name of the Directive 14/34/EC for the equipment intended for use in potentially explosive atmospheres.

1. 2. 21 and 22 Motive delphi Ex motors are in fact certified for such zones according to the norms EN 60079-0 - EN 60079-7 - EN 60079-31 by a notified body

to be used, like motive "Ex"

gearboxes, in the ATEX zones

### **CCC MARKING**

The electrical safety and the efficiency of Motive motors, with and without brakes, have been certified by the CQC certification body, as required by Chinese laws, thus allowing them to be exported to China.

### EAC MARKING

The EAC certificate of conformity (EurAsian Conformity) indicates that Motive motors meet all the applicable technical regulations of the Eurasian Customs Union and that they can therefore be sold on the territory of the acceding countries (Russia, Belarus, Kazakhstan, Armenia and Kyrgyzstan)

The mark can consequently be found on the nameplate of Motive three-phase motors

### MARINE MOTORS CERTIFIED BY RINA

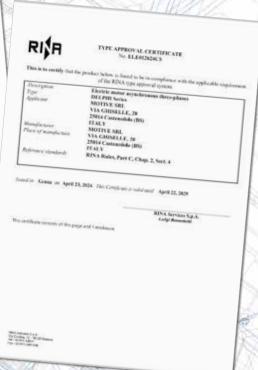

In 2015 motive was admitted to the alternative test scheme (Certificate No. 2015 / MI / 01/537), which allows a more rapid and economical testing of three-phase marine motors compliant with RINA standards, both for essential service and not essential service.

In 2019 RINA also released the type design and validation tests certification for motive marine motors. In many cases this FREE certification is sufficient for the final customer, and

therefore avoids the need to face the costs of the RINA test of each motor unit.

RINA is a member of IACS, thus complying with the rules harmonized by the 12 members of IACS (ABS American Bureau of Shipping; Bureau Veritas, CCS China Classification Society; CRS Croatian Register of Shipping; DNV-GL: IRCLASS Indian Register of Shipping; KR Korean Register of Shipping; Lloyd's Register; ClassNK Nippon Kaiji Kyokai; Polish Register of Shipping; Russian Maritim Register of Shipping)

### MOTIVE MOTORS PROTECTION

Protections must be chosen based on the specific running conditions, according to standards EN 60204-1

### **External protections**

- Protection against overloads. A thermal cut-out relay, which automatically controls a knife switch.
- Protection against peak currents by magnetic relay that controls an automatic knife switch, or by fuses; these must be set to the locked rotor current.
- If the application requires, protection against excessive speed of the electric motor, for example if the mechanical load may drive the electric motor itself and thereby create a hazardous situation.
- If special conditions or synchronised operation with other machines or parts of machines require it, protection against power failures or dips by means of a minimum voltage relay that controls an automatic power knife switch.

### Inner thermal overload cut-out switches [per CEI 2-3/IEC 34-1]

The electrical protections on the motor power line may not be sufficient to protect against overloads. If the cooling conditions worsen, the motor overheats but the electrical conditions do not change, which inhibits line protections. Installing built-in protections on the windings solves this problem:

### bimetallic device "PTO"

this is a normally-closed electromechanical device that opens when the threshold temperature is reached; it automatically

resets when the temperature falls below the threshold level. Bimetallic devices are available with various intervention temperatures and without automatic reset, per EN 60204-1.

### PTC thermistor device

this device promptly, positively adjusts its resistance once the threshold temperature is reached.

Motive motors from size 160 to size 355L are equipped as standard with 3 PTC thermistors immersed in the winding.

### PT100 device

this is a device that continuously, increasingly adjusts its resistance according to the temperature. It is useful for constant measuring of the winding temperatures using electronic

### SCHEDAPT motor thermal probes PTC+PT100 control card / interface

SCHEDAPT is capable of reading PTC

thermistors or up to 3 PT100 probes. both for winding and for bearings It allows to constantly monitor the motor temperature by reading the PT100 and/or PTC temperature probes inside the motor and to provide an output contact N.C. (normally closed by default) which, connected in series to the power supply of the external line contactor, will stop the power supply of the motor at an alarm temperature (130°C default setting by motive for PT100, editable, and PTC according to its own data) The

device to be mounted on a DIN rail. Supply voltage:  $5 \div 30 \text{Vdc}$  max 100 mA.

casing, simple and compact, allows this

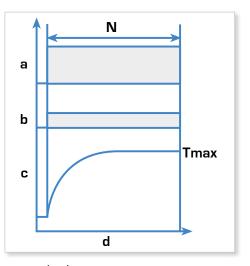

### **DUTY SERVICE**

All Motive motors shown in this catalogue are made for S1 continuous duty service, as per IEC 34-1 norm. The duty service class is shown on the rating plate.

Below are described the various types of service:

S1 - Continuous service: operating at constant load of duration N in order to reach a thermal balance.

a = load

b = electric losses

c = temperature

d = time

N = steady load operating time

Tmax = max temperature achieved

S2 - Limited-duration service.

S3 - Periodic intermittent service.

S4 - Periodic intermittent service with startup.

S5 - Periodic intermittent service with electric braking.

S6 - Uninterrupted periodic service with intermittent load.

S7 - Uninterrupted periodic service with electric braking.

S8 - Uninterrupted periodic service with correlated load and velocity variations.

S9 - Service with non-periodic variations in load and speed.

### IP PROTECTION INDEX

The protection against people accidental contacts and/or the entry of corps and/or the entry of water is expressed at international level (EN60529) by a symbolic acronym composed by a group of 2 letters and 2 numbers.

IP index of protection reference letters

1° num. Protection of people against contacts and protection against the entry of solid corps

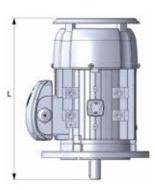

2° num. Protection against harmful entry of water

Motive motors are IP55 protected

	1° number	2° number
0	no protection	no protection
1	protection against solid corps bigger than 50mm	protection against vertical water drops
2	protection against solid corps bigger than 12mm	protection against water drops fall up to 15° of inclination
3	protection against solid corps bigger than a 2,5mm	protection against water drops up to 60° of inclination
4	protection against solid corps bigger than 1 mm	protection against water sprayed by all directions
5	protection against harmful dust deposits	protection against water launched by a nozzle of 6,3mm D with a water capacity 12,5lt/min at a distance of maximum 3 mt for 3 min
6	complete protection against the total penetration of dust	protection against water projections similar to sea waves
7		protection from temporary submersion in water, up to 1 meter in depth

### RAIN SHIELD OR CLEAN FLOW FAN COWL FOR TEXTILE INDUSTRY

For outdoor applications with V5 - V18 - V1 - V15 installation, we recommend to mount a rain shield. This configuration may also be used in textiles processing industry.

TYPE

### TOTAL SEALING

Resin coated stator is a safe solution to the presence of very strong humidity or aggressive environments (for instance, carwash systems or chemical plants). It offers also a lower heating thanks to the thermal dissipation capacity of the resin.

The ideal combination is the resin-filled terminal box. In this case, according to the customer needs, the terminal block can be partially immersed, or totally immersed in such insulating and protective resin. In alternative, the terminal box and block can be taken off and the motor frame be closed by a sealed plate from which a cable can come out.

### WORKING CONDITIONS

### HUMIDITY:

The electrical equipment must be able to work with a relative humidity between 30 and 95% (without condensation). Damaging effects of occasional condensation must be avoided by adequate equipment design or, if necessary, by additional measures (for example, Motive offers anti-condensation heaters, drain holes, resin coated stators, and resin filled terminal boxes).

### ALTITUDE AND TEMPERATURE:

the powers indicated are intended for regular use at altitudes below 1000 mt above sea level and a room temperature between + -15°C and +40°C (+100°C for delfire series) for motors having a rated power equal to or greater than 0.6 kW [IEC 34-1]:

For working conditions rather than those specified (higher altitude and/or temperature) the power decreases of 10% each 10°C of higher temperature, and of 8% for each 1000 mt of higher altitude.

It is not necessary to reduce the rated power if at an altitude higher than 1000mt and lower than 2000mt there is a max ambient temperature of 30°C or, in altitudes from 2000 mt to 3000mt there is a max ambient temperature of 19°C.

### **VOLTAGE - FREQUENCY:**

The admitted variation of supply voltage and frequency is established by the norm FN60034-1

Within this tolerance delphi motors provide the rated power reported in the plate.

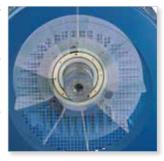

### INSULATION:

The copper is impregnated with a double layer of H class insulating enamel to ensure high resistance to electrical, thermal and mechanical stress.

A NOMEX film that wraps entirely around the coil side insulates the copper and iron from one another.

The phases are further isolated by another layer of NOMEX to protect the motors from voltage peaks that usually occur when the motor is controlled by inverter.

In case that motors with more than 75kW are controlled by inverter, we suggest to request the electrically in sulated bearing on the non drive end.

Its purpose is to open the electric circuit between the rotor and the motor frame, thus preventing that the shaft currents go through the bearings and damage their balls surface and roll tracks.

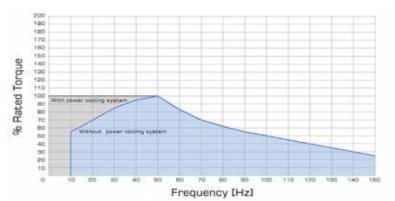

The section "technical data" of this catalogue shows the max operating temperatures according to the Class insulation shown on the plate.

Delphi motors are designed to conserve wide margins against eventual overloads, having a temperature rise that is, at rated

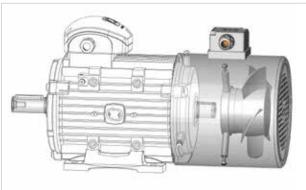

power, much lower than the operating temperature limit given by their insulation class. This fact increases considerably the motors life lenght. Such " $\Delta$ T" values are evidenced in the following performance charts. (see further details about temperature rise in the "technical data" section of this catalogue)

### ASSISTED POWER COOLING

For application with a power supply at certain frequencies (see following graph), a power cooling system (IC-416) must be used.

Motive power cooling systems are three-phase 400/50 400/60, IP 55, and with separate terminal box. "Upon request, single phase, ATEX, 24Vdc and special voltage power cooling systems are also available."

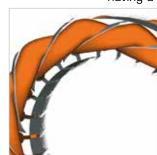

### **ENCODER**

Motors with incremental, absolute, profinet, profibus and ATEX encoders are available upon request.

In this case, assisted power cooling is

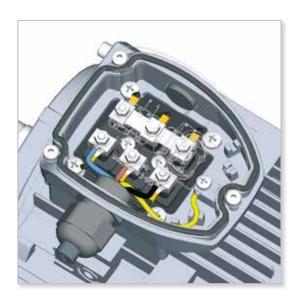

also available.

### WIRING DIAGRAMS

Motive three phase motors can be connected "Star" or "Delta".

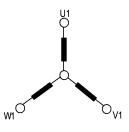

### STAR CONNECTION

Star connection is obtained by connecting together the terminals W2, U2, V2 and supplying the terminals U1, V1, W1.

The phase current lph and the phase voltage Uph are Iph = In

Uph = Un / 1,74
where In is the supply line current and Un is the supply line voltage of Star connection

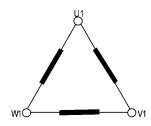

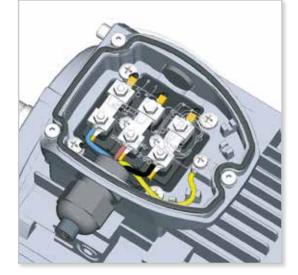

### **DELTA CONNECTION**

Delta connection is obtained by connecting the end of a phase with the beginning of the following one. The phase current lph and the phase voltage Uph are repectively:

lph = In / 1,74 Uph = Un

where In and Un are referred to Delta connection. The star-delta start is the easiest way to reduce the current and the starting torque. The motors whose rated voltage in delta connection corresponds to the mains voltage can be stared with the star-delta method

the following voltages and frequencies are inside the standard power supply of all motive 3PH motors, under S1 duty service:

### THREE-PHASE SELF-BRAKING MOTORS SERIES DELPHI AT...

Delphi ATDC, AT24 and ATTD series self-braking motors use one or 2 spring-pressure brakes, firmly spliced onto a cast iron shield at the back of the motor.

These motors include a series of characteristics normally considered options by other brands, like:

- -The standard hand lever permits to release the brake, making it possible to move manually he shaft,
- -The PTO thermal protectors in the winding are a standard up to size 132. PTC are a standard from size 160 and up
- -Easy separate connection of the brake in case that the motor is connected to an inverter.

On ATDC and ATTD, the separate brake power supply is achieved, whenever needed, by connecting directly to the brake terminal board located inside the motor terminal box.

On AT24, the 24Vdc single or double brakes are designed to be directly connected to an inverter (usually having a 24Vdc plug)

On request, the brakes can be modified to be extremely silent for usage in special environments like theatres

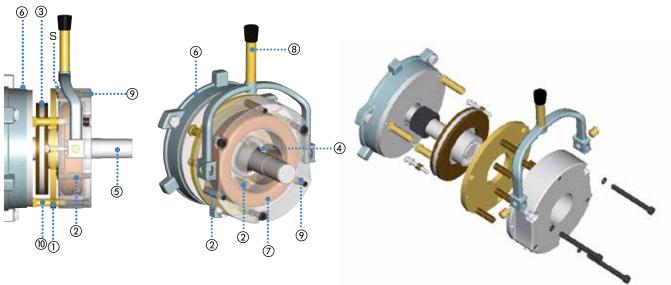

### IE2, high efficiency class IEC 60034-30-1

### ATTD

### BRAKE DESCRIPTION

The delphi AT... series brakes are electromagnetic brakes with negative operation, whose braking action is exercised in the absence of power supply.

The brakes insulation class is F. The brakes lining is asbestos-free.

The rectifier is of relays type, with protection varistors at the entry and the exit. All brake assemblies are protected against corrosion by painting or heat galvanizing and resined winding. The parts most subject to wear are treated in special atmospheres that provide considerable wear resistance to the parts.

### **BRAKE OPERATION**

When the power supply is interrupted, the excitation coil ⑦ is no longer powered and therefore doesn't exert the magnetic force necessary to restrain the mobile armature ①, hwich, pushed by the pressure springs ②, compresses the brake disk ③ against the motor flange ⑥ on one side and the armature itself on the other, thereby creating a braking action.

### **ADJUSTMENT**

On ATDC and ATTD motors bigger than size 90, two different types of adjustment are possible ( download the technical manual from <a href="https://www.motive.it/en/manuali.php">https://www.motive.it/en/manuali.php</a> ) The braking torque is set to its max level by Motive, but it can be decreased by acting on the adjuster screws (§ (ATDC and ATTD motors) or on the knob (§ (AT24)). Brake adjustment is only possible from size 90 L to size 280.

### MANUAL RELEASE

ΙP

Motive brake motors are supplied with the manual release lever in their standard version. If not wished, the lever is like a screw, that can be taken away simply turning it. ATTD tandem brake motors, from size 180 up to sized 280, cannot have the manual

release.

This device prevents the exit or ingress of dust, humidity, dirt, etc., out of or into the braking area.

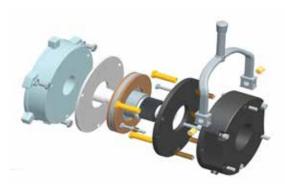

It is inserted into the groove on the stator. If your brake doesn't have such a groove, you must order a specifically machined brake for that.

In order to safeguard the braking torque, it is necessary to clean periodically the parts inside the rubber ring seal by the dust created by the disc lining.

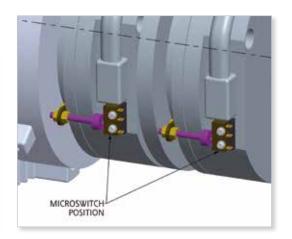

When high humidity in the air can rust fastly the contact surface between the brake disc and the cast-iron NDE shield of the motor, you can request to motive to add a stainless steel shield.

### MICRO-SWITCHES TO DETECT BRAKE POSITION

Optional.

### POWER SUPPLY

ATDC brakes are DC brakes power supplied by a rectifier installed inside the motor main terminal box.

The following tablechart shows the tensions on the rectifier and the brake of ATDC model

Туре	input voltage on rectifier [Vac]	output voltage to brake [Vdc]
ATDC 63-100	220-280	99-126
ATDC 112-280	380-480	171-216

Unless there's a different request of the client, motive supplies ATDC brake motors with the rectifier already connected directly to the main terminal block of the motor (fig. 1 and 2), in order to permit to the motor switching to act at the same time on the brake.

In case that the motor is power supplied by a frequency inverter [fig. 3], or at a special voltage\*, or at a low tension during the start, or in case that the motor is used to move loads which can have an inertial movement, like lifted weights [such inertial movement can move the motor when the power is switched off, and the motor can act like a generator on the rectifier avoiding the brake locking], disconnect the motor main terminal board from the rectifier, and connect separately the rectifier [ATDC] [fig. 3 and 4].

TA special rectifier permits to solve the problem of inertial movements with no need for a separate power supply to the rectifier (fig 2)

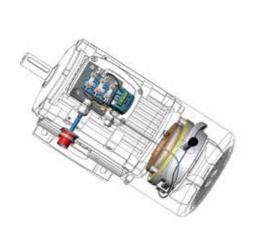

This exclusive rectifier offers the following innovations:

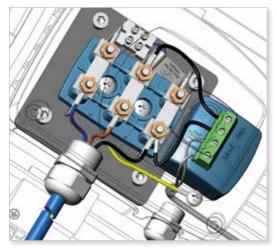

- double semi-wave technology.
- special vibration proof 6 Ampere relays (like the ones used on Ducati race motorbikes).
- electric arcs ultra resistant contacts in silver alloy.
- relays system instead of normal mosfets system, thus more resistant against tension peaks, even if impulsive.
- an in-built current reading system which controls the current sinusoid and the relay commutation time.

What's the advantage? Rectifier is normally the "brain" and the fragile point of any dc brake motor. This rectifier is stronger against disturbs coming from power line, much stronger than what required by European EMC rules for industrial environment; they are more resistant against vibrations; and they are faster.

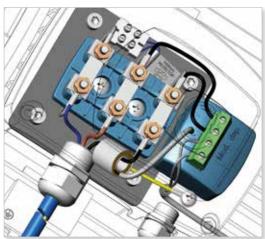

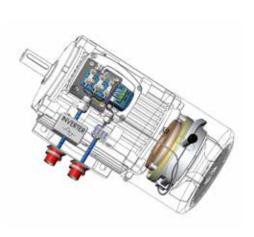

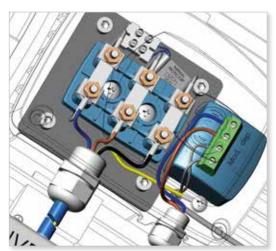

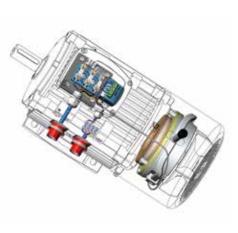

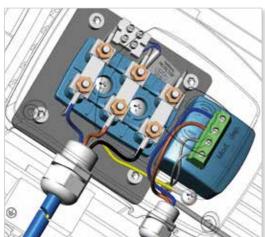

ATDC/\(\separate 400Vac/180Vdc rectifier\) + inverter (fig. 3)

ATDC + separate 400Vac/180Vdc rectifier connection (fig. 4)

### CONFIGURATOR

### Configure what you need by this automatic consultant, and get CAD files and data sheets

Motive configurator allows you to shape Motive products, combine them as you want, and finally to download 2D/3D CAD drawings, and a PDF datasheet.

### Search by performance

If you're not sure about the best products combination that you should select for your purpose, you can input your wishes, like final torque, final speed, use, etc, and the configurator will act like a consultant.

It will give you a list of applicable product configurations; you can then download a PDF data sheet featuring performance data and dimensional drawings for each configuration, as well as 2D and 3D drawings.

### Search by product

To be used if you already know the product configuration that you want, and you just want to get quicker a PDF data sheet featuring performance data and dimensional drawings for 2D and 3D drawings.

free access without login <a href="http://www.motive.it/configuratore.php">http://www.motive.it/configuratore.php</a>

### TECHNICAL DATA

= Is

Cs

The general electrical specifications are listed in the performance charts that follow. To understand their contents, the following general definitions are provided.

Rated Power:

it is the mechanical power measured at the shaft expressed, according to the latest indications of international Standards Committees, in Watts or Kwatts. However, in the engineering sector it is still common to refer to power in terms of HP

Rated Voltage:

the voltage to be applied to the motor terminals in accordance with the specifications in the following tables

Frequency:

rated voltage

480 ± 5%

Rated Current:

"In" is the Rated Current, expressed in Ampere, absorbed by the motor when supplied at Rated Voltage Vn (V) and giving the Rated Power Pn (W) and it is obtained by the formula

$$\ln = \frac{Pn}{\sqrt{3.V_n \cdot \eta \cdot \cos\varphi}}$$
 (A)

In the following tables, the rated currents are referred to a Voltage supply of 400V. For other voltage supplies the absorbed rated current can be considered inversely proportional to the voltage supply. FX:

Synchronous speed:

is expressed in rpm and it is obtained by the formula

f 120/p

f= supply frequency Hz p= number of poles pairs Motive motors can face also temporary overloads, with Current increases of 1.5 times the rated current for at least 2 minutes.

0,93

0.96

1

Starting current (or locked rotor current): (you see diagram)

Rated torque:

Cn is expressed in Nm, and it corresponds to the rated power and rated rpm. It is given by the multiplication of the force for the arm (distance) and it is measured in Nm because the force is expressed in in Newton and the distance in metres. The rated torque value is obtained by the formula

 $Cn (Nm) = Pn \times 9550 / rpm$ Pn= Rated power in KW rpm= rated rotation speed

Cmax

Cn

141

Efficiency:

η is expressed in % and it is given by the relation between the output Power and the addition of output Power and the electric losses of the motor, that is the input power absorbed by the motor. The electric motors losses are mainly of two kinds: for joule effect (rotor and stator) and iron losses.

The latest cause essentially heat. An higher efficiency means energy savings. lower heating. longer life of insulating materials.

The smaller a motor is, the more the presence of a double lip oil seal as the ones used on the drive end of delphi flanged motors (B5 or B14) may affect, following the friction generated, performance. The motors B3 up to size 132, however, have V-rings with an almost non existent level of friction. For simplicity, the following performance tables indicate the levels of absorption and performance measured

on B14 motors for size 56 and B3 motors for size 63 and above.

Starting torque (or locked rotor torque):

Cs is the torque that the motor can provide with the rotor at a standstill and the rated power supply.

Maximum torque: Cmax is the maximum

torque developed by the motor at the rated power supply, at a certain speed. It represents also the value of the resistant torque after which the motor stops. In the following performance charts, it is indicated the relation between maximum torque and

rated torque and maximum torque

Power factor or coso: it represents the coseno of the voltage and current gap angle.

### TECHNICAL DATA

temperature rise  $\Delta T$ :

The temperature rise " $\Delta$ T" is the change in temperature of the entire winding of the motor, including the wire placed deep inside the stator slots, when it is being operated at full load.

For example: if a motor is located in a room with a temperature of 40°C, and then is started and operated continuously at the rated power, the winding temperature would rise from 40°C to a higher temperature. The difference between its starting

temperature and the final inner elevated temperature, is the  $\Delta T$ . Almost all our motors are designed to offer a temperature rise of B class or even lower, while their insulation system is min in F class.

Class	amb T (°C)	ΔT (°C)	hot spot allowance (°C)	Tmax (°C)	
Α	40	60	5	105	
E	40	75	5	120	
В	40	80	5	130	
F	40	105	10	155	
Н	40	125	15	180	

example of overload capability (=life bonus) of an F class motor, with B class temperature rise

hot spot allowance  $\Box \Delta T$ T. amb.

> This extra margin gives the motor a "life bonus". As a rule of thumb, insulation life will be doubled for each 10 degrees of unused insulation temperature capability.

> The most common method of measuring the temperature rise of a motor is based on the differences between the cold and hot ohmic resistance of the winding.

The formula is:

Noise:

The noise is expressed in dB(A). The measures must be taken in accordance with the standard ISO 1680-2, in order to find the Sound Power level LwA measured at 1m of distance from the perimeter of the machine.

EN 60034-9 standard describes the acoustic Power limits to be respected, indicating the maximum sound power level LwA. The noise values indicated in the performance charts that follow are referred to a no-load motor working, supplied at 50Hz and with a tolerance of +3 dB(A).

The moment of inertia can be calculated in this way:

 $J = (1/2) \times M \times (R^2)$ 

Where M [Kg] is the rotation mass, while R [m] is the ray of the volume at cylindrical symmetry.

### TOI FRANCES

The data of each motor are specified in this catalogue like requested by the norm IEC 34-1. This describes, in particular, the following tolerances:

Efficiency Output Power nput Power)	-15% di (1- η)
Power factor	1/ 6 of (1- cosφ) min. 0.02 max 0.07
ocked rotor torque	-15% of the guaranteed torque +25% of the guaranteed torque
Maximum torque	-10% -of the guaranteed torque, if torque is not less than 1,5- 1,6 the rated torque
Voise	+3dB
T/	+10°C

The test reports on which the following tables are based can be downloaded from https://www.motive.it/en/rapporti.php

 $\Delta T$  [°C] = (R2-R1)/R1\*(234,5+T1)-(T2-T1) Where:

R1 = Cold winding resistence in Ohms (just before that the test begins)

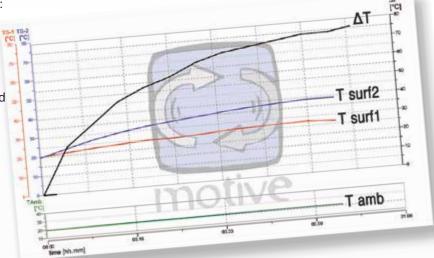

R2= Hot winding resistance in Ohms (when the motor has reached its thermal equilibrium)

T1= ambient temperature in °C when test begins

T2= ambient temperature in °C when test is stopped

To change  $\Delta T$  from Centigrade to Fahrenheit: °C (∆T) x 1,8

Note: The motor surface temperature will never exceeed the internal temperature of the motor, and will depend upon the design and cooling arrangements.

Any 2D or 3D PDF datasheet, or 3D CAD model, with or without gearboxes, VFDs, and special executions, can be downloaded by <a href="https://www.motive.it/en/configuratore.php">https://www.motive.it/en/configuratore.php</a>

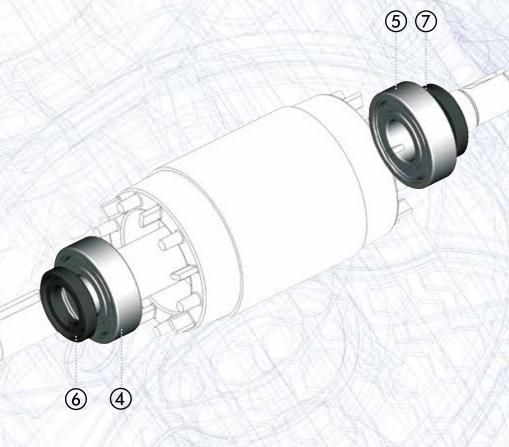

NOTE: motors can be improved in any moment. The data in www.motive.it can be more updated. Each data is even more detailed and proven by the type test reports loaded in <a href="https://www.motive.it/en/rapporti.php">https://www.motive.it/en/rapporti.php</a> Also the IE4 motors list is being increased constantly.

There is an ongoing project modification during the years 2016 and 2017 for which in such years the motors can also be equipped with open bearings (not ZZ) and lubricators

"bearing lubrication devices" are an optional.

### TERMS OF SALE AND GUARANTEE

### ARTICLE 1 GARANTEE

1.1. Barring written agreements, entered into between the parties hereto each time, Motive hereby guarantees compliance of products supplied and compliance with specific agreements. The guarantee for defects shall be restricted to product defects following design, materials or manufacturing defects leading back to Motive.

The Guarantee shall not include:

- \* faults or damages ensuing from transport., faults or damages ensuing from installation defects; incompetent use of the product, or any other unsuitable use.
- \* tampering or damages ensuing from use by non - authorised staff and/or use of non - original parts and/or spare parts;
- Defects and/or damages ensuing from chemical agents and/or atmospheric phenomena (e.g. burnt out material, etc.);routine maintenance and required action or checks;
- Products lacking a plate or having a tampered plate.
- 1.2. Returns to credit or replace will be accepted only in exceptional cases; However returns of goods already used to credit or replace won't be accepted in any case. The guarantee shall be effective for all Motive products, with a term of validity of 12 months, starting from the date of shipment. The guarantee shall be subject to specific written request for Motive to take action, according to statements, as described at the paragraphs hereinbelow. By virtue of aforesaid approval, and as regards the claim, Motive shall be bound, at its discretion, and within a reasonable time-limit, to alternatively take the following action:

- a) To supply the Buyer with products of the same type and quality as those having proven defective and not complying with agreements, free ex-works; in aforesaid case, Motive shall have the right to request, at the Buyer's charge, early return of defective goods, which shall become Motive's property;
- b) To repair, at its charge, the defective product or to modify the product which does not comply with agreements, by performing aforesaid action at its facilities; in aforesaid cases, all costs regarding product transport shall be sustained by the Buyer.
- c) To send spare parts free of charge: all costs regarding product transport shall be sustained by the Buyer.
- 1.3 The guarantee herein shall assimilate and replace legal guarantees for defects and discrepancies, and shall exclude any other eventual Motive liability, however caused by supplied products; in particular, the Buyer shall have no right to submit any further claims. Motive shall not be liable for the enforcement of any further claims, as of the date the guarantee's term of validity expires.

### ARTICLE 2 CLAIMS

2.1. Without prejudice to the application of provisions in Law, dated June 21, 1971, and as per Article 1:

Claims, regarding quantity, weight, gross weight and colour, or claims regarding faults and defects in quality or compliance, and which the Buyer may discover on goods delivery, shall be submitted by a max. 7 days of aforesaid discovery, under penalty of nullity.

### ARTICLE 3 DELIVERY

- 3.1. Any liability for damages ensuing from total or partial delayed or failed delivery, shall be excluded.
- 3.2. Unless differently communicated by written to the Client, the transport terms have to be intended ex-works

### ARTICLE 4 PAYMENT

- 4.1. Any delayed or irregular payments shall entitle Motive to cancel ongoing agreements, including agreements which do not regard the payments at issue, as well as entitling Motive to claim damages, if any. Motive shall, however, have the right, as of the payment's due date and without placing in arrears, to claim interest for arrears, to the extent of the discount rate in force in Italy, increased by 5 points. Motive shall also have the right to withhold material under repair for replacement. In the case of failed payment, Motive shall have the right to cancel all guarantees on materials, as regards the insolvent Client.
- 4.2. The Buyer shall be bound to complete payment, including cases whereby claims or disputes are underway.

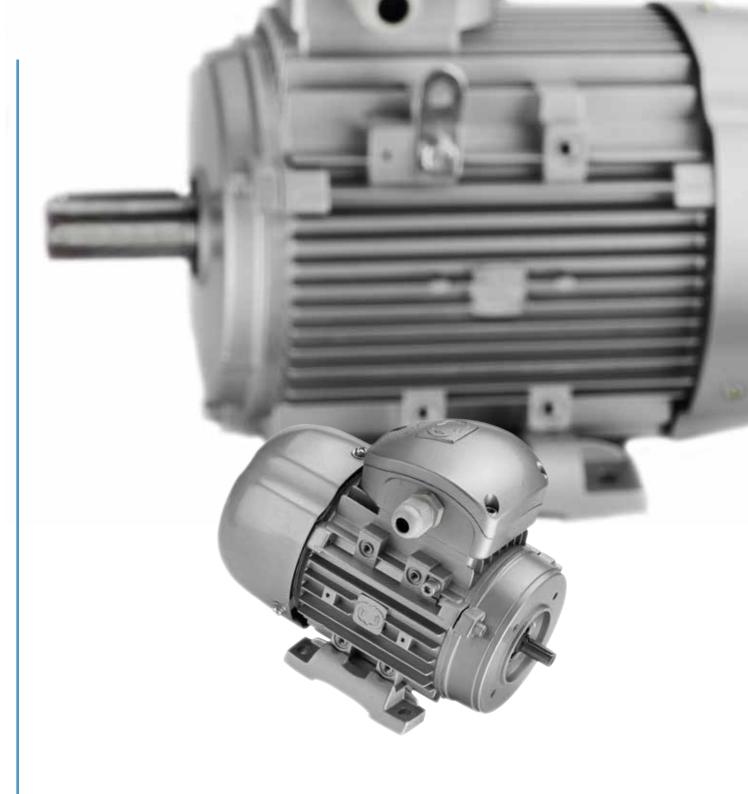

### DOWNLOAD THE TECHNICAL MANUAL FROM WWW.MOTIVE.IT

ALL DATA HAVE BEEN WRITTEN AND CHECKED WITH THE GREATEST CARE. WE DO NOT TAKE ANY RESPONSIBILITY FOR POSSIBLE ERRORS OR OMISSIONS. MOTIVE CAN CHANGE THE CHARACTERISTICS OF THE SOLD ITEMS ON HIS FIRM OPINION AND IN EVERY MOMENT.

You can download each motor or gearbox final test report from <a href="https://report.motivesrl.it/">https://report.motivesrl.it/</a> starting from its serial number
